SUMMARY

Hi, I'm Jayanta Mondal — a BCA (Hons) student from Kolkata, India, currently building my journey into the world of software development from the ground up. I started with a simple curiosity: how do websites, apps, and systems actually work behind the scenes? That curiosity quickly turned into a passion for learning programming and solving real-world problems using technology. Right now, I'm focused on building a strong foundation in development and continuously improving through hands-on projects. Instead of just learning theory, I believe in learning by building. 🖥️ What I'm currently working on:- Developing my personal portfolio website: <https://jayantadev.in>- Learning Web Development (HTML, CSS, JavaScript)- Strengthening programming with C , C++ , JAVA, Python and SQL- Exploring modern technologies like AI, DevOps, and real-time applications 🧠 My approach: I learn step-by-step, build consistently, and share my progress. I enjoy breaking down complex concepts into simple ideas and applying them through projects. 🚀 My goal: To become a skilled developer, start working on real-world projects, and eventually secure internships where I can grow and contribute. 😊 I'm open to connecting with developers, students, and professionals who are passionate about learning and building. Let's connect and grow together!
